Arief Pribadi

Vast developments of information technology in the recent years leads to the increasing usage of multimedia in many sectors, including education. A learning media in 2D animated video format appears to possess some decent potencies. For those reasons, the author created a learning media in a form of a two-dimentional video for his final project. The purpose of this final project is to make a fully 2D animated video that can be used as a learning media. The application used on this project is Adobe After Effects. The making process of this video divided to pre-production, production and post-production. The video then implemented by uploading it to www.youtube.com. The application used on this project is Adobe After Effects.
