The use of website from giving information to supporting business in the company. The use of web technology has been applied to many companies because website can be access by user using web browser that can be found in all computer and smartphone operating system. In Japan, job finding is a hard thing to do even with qualification. Lack of information about job opening caused this problem. By using web application, we will provide information about job opening from internet to be accessed by job finder. By accessing these information, job finder have access to more opportunity in job searching.

Keyword: system, online, website, job, opening
