*Abstract*

This Final Project research was conducted with the aim of knowing how to regulate ownership of land rights in coastal border areas and to analyze what the social impacts of land rights in coastal border areas in Meral District, Karimun Regency are.

The research method implemented is a type of normative-empirical legal research, where the material of this study comes from legislation and is combined with field studies. Data collection techniques carried out in this study are by conducting interviews and observations made directly. The type of data used is primary data which is used as a reference to be able to strengthen secondary data. So that the data obtained is associated with the theory to get answers to the problems that occur.

Based on the results of this study, it was found that the ownership of land rights in coastal border areas could not be granted land rights with the status of property rights and ownership of the land caused some impacts on the local community. The problem that is the object of this research in terms of the Conflict Theory by Ralf Dahrendorf relating to the causes of conflict in achieving a justice that will be achieved and the Justice Theory according to John Rawls about a justice that can be achieved with equality before the law.

Keywords: Land Rights, Beach Side, Justice
