DAFTAR GAMBAR .......................................................................................... xi
DAFTAR LAMPIRAN ....................................................................................... xii

BAB I PENDAHULUAN

1.1 Latar Belakang Masalah ........................................................................ 1
1.2 Rumusan Masalah ............................................................................... 2
1.3 Batasan Masalah ................................................................................ 2
1.4 Tujuan dan Manfaat Penelitian ........................................................... 3
1.5 Metodologi Penelitian ........................................................................ 3
1.6 Sistematika Pembahasan ................................................................... 4

BAB II TINJAUAN PUSTAKA

2.1 Current Research ................................................................................. 6
2.2 Sensor PIR (Passive Infra Red) ............................................................ 9
2.3 Arduino ............................................................................................... 10
2.4 Pengertian Citra ................................................................................ 12
2.5 Grayscale ........................................................................................... 14
2.6 Haar Cascade Classifier .................................................................... 15
2.7 Haar Feature ..................................................................................... 17
2.8 OCR (Optical Character Recognition) .............................................. 17
BAB III METODOLOGI PENELITIAN

3.1 Perancangan Penelitian ............................................................... 23
3.2 Perancangan Sistem ................................................................. 23
3.3 Perancangan Hardware ............................................................. 23
3.4 Pelatihan *Haar like features* untuk mendeteksi plat mobil Indonesia ................................................................. 25
3.5 Penjelasan pembuatan program ............................................... 29

BAB IV ANALISA DAN PEMBAHASAN

4.1 Pengujian Program ................................................................... 36
4.2 Pengujian segmentasi gambar plat mobil pada program ........... 36
4.3 Pengujian menggunakan gambar yang sudah ada .................... 36
4.4 Pengujian secara nyata menggunakan *hardware* ...................... 40

BAB V PENUTUP

7.1 Kesimpulan .............................................................................. 43
7.2 Saran ...................................................................................... 43
