ABSTRACT
DESIGNING AND ANALYSIS OF WEB BASED
STUDENT INBOUND SYSTEM WITH
SCRUM METHODOLOGY

NPM : 1531125
RIAN MARTIN

Designing student inbound information system aims to build a application that can be used by adminitrator and officers of International Relation Office (IRO) in managing data and documents of exchange student between campus. This project building period start at 13th Sep 2018 until 11th January 2019.

This system designed using System Development Life Cycle method with HTML 5, PHP verison 7, CSS, Bootstrap and JQuery programming languages. Applications was implemented in International University of Batam.

This student inbound system helps manager of department to produce student exchange report and also helps officers in managing data and documents of exchange student. With the implementation of this system, archiving documents become easy, time and space saving and yet the maintenance is easier.

Keywords : *student inbound system, document management, scrum method, web programming, student exchange*
