ABSTRACT

BATAM CATERING BOOKING SYSTEM DESIGN AND IMPLEMENTATION WITH SCRUM METHOD

Nana Charlyna
NPM: 1531065

This thesis project was carried out by designing a catering portal system for catering services in Batam. The application in this project is web based and developed by using PHP, Javascript, HTML and CSS. Additionally, the system designed is also assisted by the PHP Framework, namely the Laravel Framework and the Bootstrap Framework to maximize the appearance and user experience on the system designed. In designing this project, the writer employed the Scrum method to provide flexibility and to increase effectiveness and efficiency in developing this system. The result of this thesis project is a system designed to help food catering business to grow and market their product and help consumer to order and find catering food business easier.
