ANALYSIS OF AGE, SIZE AND FINANCIAL RATIO EFFECT ON GROWTH OF COMPANIES LISTED IN INDONESIA STOCK EXCHANGE

Rustam
NPM: 1542021

Abstract

This study aims to find out the reasons why companies can grow fast and slow based on the age of the companies that exist in companies registered in Indonesia. Based on the variables used for research are Growth, Size, Age, Asset, Debt and Sales.

Data Samples collected for this study had 611 companies on the Indonesia Stock Exchange from 2013-2017 for a total of 5 years and using the Purposive Sampling method. From all data collected from the end of year financial statements of each company published (www.idx.co.id). The results for the data collected will be tested by the regression method and the Eview and SPSS (Static Package for Social Sciences) program.

From the test results to the conclusion that age has a significant negative relationship to growth, size has a negative relationship to growth, asset has a positive relationship to growth, debt has a positive relationship to growth, sales have no significant relationship to growth.

Keywords: growth, age, size, asset, debt and sales.
