This study was conducted to determine the relationship between corporate governance and firm performance in companies listed on the Indonesia Stock Exchange (BEI). Independent variables used in this study include board size, chairman of ownership, foreign ownership, ownership concentration, and control variable leverage. This study used data from financial statements in the period from 2013 to 2017. The sampling method used was purposive sampling, with 323 companies, or 1,615 observation data used in this study. Data were analyzed using EViews program version 8.

Based on the results and testing of the data, it has been found that foreign ownership, ownership concentration, and leverage have a significant effect on the firm performance of the company, while the size of the board and the chairman of ownership do not have a significant effect on the firm performance of the company.

Keywords: firm performance, corporate governance, Indonesia Stock Exchange.
