

ABSTRACT

DEVELOPMENT PROJECT APARTMENT “FORMOSA RESIDENCE”

ANNUR KURNIAWAN
NPM: 1511011

This practical work aims to determine the process of implementing a multi-stories building project, which in this case is the quality inspection, implementation of occupational health and safety, project scheduling, calculation and supervision of manpower / workers, project financing, methods field implementation, equipment management and inspection / commissioning / handover processes.

Practical work activities carried out on the Apartment Building Project "Formosa Residence" will be a source of research data on the writing of this practical work report. The method used in the implementation of this practical work are observation on working progress, interview, literature review, and instrument (documentation).

Practical work activities are carried out during the period 01 March 2018 until 01 June 2018 is considered enough time to study the process of implementing a project. Data collection techniques are carried out by observing the project fieldwork process.

The results obtained from this practical work activity are that they can actually be made as much as possible in the past, how ever you can and continue to use as much as you can. After they have been released, they can be as much as you can from the next day of my meal.
