ABSTRACT

This practical work is done so that the client from PT. Global Dinamika imagery can find information from Medicinal data that is owned by each doctor. Which can include information from medicine data, expired information, remaining stock, capital prices and selling prices.

Then the application that is made is also website-based, which functions to input drug data that can be validated before being entered.

In writing practical work reports this website application is designed and created using C #, HTML, JavaScript and CSS programming languages. This web application also uses ASP.NET and Entity Framework. It is expected that this web application can accelerate the company's performance.

Keywords: web application, inventory, medicine, entity framework, .Net
