

ABSTRACT

**ANALYSIS OF TIME MANAGEMENT USING THE
S CURVE METHOD IN PAPA MAMA
RESIDENCE BUILDING**

HARIYANTO
NPM : 1611004

This internship program aims to analyze and understand how to apply time management using the S curve method in the construction process of Papa Mama Residence buildings. Internship program activities are carried out from March 4, 2019 to June 4, 2019. The method used in this internship program activity are observation, interview, and manufacturing process analysis.

This internship program activity provides experience to the author regarding the system and method of carrying out field work in a construction project. During the internship program, the writer can find out about how to make the S curve method which is implemented directly in the construction process and observe the obstacles that exist during the construction.

Based on the analysis conducted by the author and direct monitoring in the construction area, the author observed at how this management system was applied. So, Papa Mama Residence construction project went smoothly until the final stages of the project.
