

EXECUTIVE SUMMARY

THE DESIGNING OF DRAINAGE ANALYSIS AT UNIVERSITAS INTERNASIONAL BATAM

NUR DZURAI DA
NPM: 1611009

The topic that writer take it is the designing of drainage at Universitas Internasional Batam. In the discussion of this report, writer calculates the flood discharge and its dimensions to get the cross-section design result. On this planning wears four cross-section streams of water, with different sizes.

The implementation of the practice provides an experience to the authors on the irrigation system about the deep knowledge of the theories and the calculation of the discharge.

Keywords: cross section design, flood discharge calculations and dimensions.
