

## ABSTRACT

### ANALYSIS OF THE GIRDER BEAM IN KABIL BUILDING DEVELOPMENT PROJECT

SUDEWAN  
NPM : 1611016

*Contruction work will initially have contruction plan,schedule contruction work in this case the author take girder beam analysis to determine the strength of girder beam in holding the load to be accomanded. Then the author must be stages of the contruction of the dock as well as the method of the method.*

*From the result obtained in practical that took place at Kabil, the writer stated that which is planned by the project planning, in turn out in the girder beam can hold load structure, live loads, those moment that will be hold the girder beam.*

*The perpose of practical work is so that the writer can understand the way and steps that will be carried out in the accompanying work safety and comfortbatly first. And writer can know materials that will be used in a probject and the problem that are often and how to resolve without harming anyone.*

*Keyword : Beam girder analysis of building development in kabil.*
