## **DESIGNING AN ACCOUNTING SYSTEM IN TRI SUNCOOL**

**Celine  
NPM: 1642069**

### ***ABSTRACT***

*The target of the implementation is to assist Tri Suncool in recording accounting and reporting processes. Previously, Tri Suncool did not have a system for recording, so financial reports could not be generated. This design activity was carried out in the period of 1 July - 30 November 2019. The method applied in the data collection stage was the question and answer method and observation.*

*The accounting system that is designed is based on Microsoft Office Access. The system is designed based on the needs of the business that is being lived and can be used in producing reliable financial reports in the form of income statements, statements of financial position.*

*One of the positive impacts generated by the design of this accounting recording system is that the user becomes more understanding about financial related matters which so far have only been using the estimation method.*

*Keywords: accounting, final project, systems, recording*
