Sometimes, people suffering from obesity/diabetes are often heard. This disease is due to the excess of mainly carbohydrates and lipid in an individual's diet and the lack of expenditure of energy such as exercise. Therefore, the natural plant, in its scientific name, *Tournefortia* is believed to be a traditional cure for the problem. A sample of natural plant (*Tournefortia* extract) juice, lime juice, ginger juice and grapefruit juice was prepared for the experiment. Fresh chicken fat was chosen and prepared as they contain a high value of cholesterol. The chicken fat was mixed with water, dried using a filter paper and then immersed in the juice samples for a duration of 3 hours. The initial and final mass of chicken fat was recorded. At the end of the experiment, it is found that ginger and *Tournefortia* extract shows significant in reducing the mass of chicken fat. Thus, it can be concluded that *Tournefortia* extract and ginger has the potential to be the future cure for obesity.

Future Demand Of Localized Renewable Energy Generation Policy For Zero Carbon Footprints

Supriyanti Heli, Di Anwar-Rubani-Rahli

The Indian power system is gradually going to face extraordinary technical and institutional shifts in the future. Present-day Indian energy policy targets the demand for a clean, economic along with safeguarded energy supply. Decarbonization of the electricity system is linked to the technique of harnessing effective and renewable energy supply and dealing with factors such as aging electricity facilities and potential interferences. With this paper, we offer a dialogue about the economics of extended use of coal-based energy generation. We observe that there is a broad scope for exploration considering the private localized generation solutions. In this view, we offer strategies for the forthcoming stages of policy development and research which are likely to be necessary to focus on public policy on local generation and to role in the future of Indian energy supply.

Pizza Dishes Keaja: Acculturation Of Western And Eastern Culinary

[View Full Paper](#)

The dynamic of human movement allows to be happened the cultural acculturation between nations and tribes. Acculturation process runs well if it produces the integration of cultural elements. Culinary is a part of culture that is inherent culture on that nation. Therefore the dynamic of human movement allows to be happened culinary acculturation among nations. Culinary acculturation can be happened in various forms, the entry of foreign culinary elements into traditional culinary or vice versa. The process of culinary acculturation is conducted through qualitative approach with multidisciplinary sciences, with the reason that culinary is part of culture. Culinary product studied is pizza Dishes Keaja that is original from Indonesia. The study result shows that the goal of culinary acculturation for Keaja Dishes is relate to two traditional culinary base area and it is more popular by society. In the situation of compare foreign culinary, Keaja Dishes, put traditional elements into foreign culinary, so it happens diversification of culinary products because the treasure of a national culinary wealth. Diversification is happened when the characteristics of traditional culinary is present in foreign culinary. One of culinary product of western and eastern acculturation result is Pizza Dishes Keaja, where it mixes the basic materials of Italian with traditional elements of West Java, which is spices and onion.

K-Gram As A Determinant Of Plagiarism Level In Kable-Karp Algorithms

Wahyuni Astuti Utama, Barbara, Hasanah, Rizki Rahmi, Gusti Saqqa

Kable-Karp is one of the algorithms used to detect the similarity levels of two strings. In this case, the string can be either a short sentence or a document containing complex words. In the algorithm, the plagiarism level determination is based on the same high value on both documents examined. Each word will form a-gram of a certain length. The a-gram will then be converted into a high value. Each high value in the source document will be compared to the high value in the target document. The same number of hashes is the level of plagiarism created. The length of a-gram is the determinant of the plagiarism level. By determining the proper length of a-gram, it produces the accurate results. The results will vary for each a-gram value.
