#### ABSTRACT

Females were regarded as incompetent as a leader before the current modern era. But, female in managerial positions has been increasing since 2015. As part of corporate governance, there is only a few research regarding gender diversity's relationship with financial distress with different results on different context. This research investigates the role of board gender diversity on firm financial distress. Multiple linear regression is used as the method of study. In general, board gender diversity does not have any relationship with financial distress in the infrastructure firms. When dissected into 4 sub-sectors, 1 out of 3 sub-sectors with 1 other sub-sector excluded, shown a negative relationship between board gender diversity and financial distress while the other 3 sub-sectors do not show any significant relationship.

**Keyword:** Gender Diversity, Financial Distress

### Apakah Diversitas Gender Direksi Mempengaruhi Financial Distress? *(Align left, Times New Roman 12pt, maksimal 15 kata menggunakan huruf Capitalize Each Word)*

#### ABSTRAK

Perempuan dianggap tidak kompeten pada masa sebelum era modern saat ini. Namun, perempuan yang menjabat pada posisi manajerial telah mengalami peningkatan sejak tahun 2015. Sebagai bagian dari tata kelola perusahaan, hanya sedikit penelitian yang ditemukan terkait dengan hubungan diversitas gender pada financial distress dengan hasil penelitian yang berbeda-beda pada masing-masing konteks. Regresi linear berganda digunakan sebagai metode penelitian. Secara umum, diversitas gender tidak menunjukkan adanya hubungan signifikan terhadap financial distress pada sektor infrastruktur. Ketika dibagi menjadi 4 sub-sektor, 1 dari 3 sub-sektor dengan eksklusi 1 sub-sektor menunjukkan adanya hubungan signifikan negatif antara diversitas gender dengan financial distress. Sub-sektor lainnya tidak menunjukkan adanya hubungan antara diversitas gender dengan financial distress.

**Kata Kunci:** Diversitasi Gender, Financial Distress

---

## INTRODUCTION

Before the modern era, females were never considered for their ability in holding a position of leadership as they were regarded as incompetent based on stereotypes where females don't have broad insights into the business world as well as being relatively inexperienced. Based on this reason, only males were holding managerial positions in the past (Fitriana & Cenni, 2021). The role of females in society was also affected due to this reason in which they were left out on most occasions compared to their male counterparts (Kartika & Kanada, 2017). Issues that are related to gender equality don't seem to have any solution and will always be a problem in every aspect of livelihood. This particular matter isn't just an issue for Indonesia (Ismail et al., 2020). On the bright side, gender equality has been seeing improvements in which it is being widely accepted by people from many countries (Sari et al., 2021).

Based on Badan Pusat Statistik (BPS) Indonesia's data, only 22,32% of managers in Indonesia were female in 2015. But more and more females in managerial positions are seen where there is an increase to 32,5% of managers in Indonesia are female in the statistics released by BPS Indonesia in 2021. Compared to Europe, Indonesia has more females in managerial positions whereas, in Europe, only 30% of managers are female (García & Herrero, 2021). Đăng et al. (2020) stated that literature related to gender diversity in executive positions has become increasingly important based on the fact that there is a positive trend in the number of female executives throughout countries.

Financial distress is a situation faced by companies when the mentioned firms are unable to clear their liabilities when it's due (Farooq & Noor, 2021). If a company is in financial distress, it will show certain characteristics such as paying out fewer dividends, recording net losses, facility closures, to being insolvent (Isayas, 2021). Whenever a company is facing financial distress, restructuring debts will often be a choice in hopes of improvements in its financials (Isayas, 2021). Otherwise, they will file for bankruptcy (Isayas, 2021). Many parties will suffer when a company faces financial distress, such as investors, creditors, and often time suppliers as financial distress comes with a high cost because legal costs will be incurred, interest on debts increases, and opportunity costs for projects with positive NPV (Net Present Value) because of difficulties in obtaining funds whereas companies will no longer be able to issue new shares or bonds (Yousaf et al., 2020).

Board gender diversity is a part of corporate governance. Literature investigating the effects of corporate governance towards firm performance, firm value, and many other company factors including financial distress is commonly found (Bhat et al., 2018; Endrikat et al., 2021; Gafoor et al., 2018; Mishra & Kapil, 2018; Orazalin, 2019; Sobhan, 2021). But literature concerning board gender diversity affecting financial distress in companies isn't as common as the forementioned literature. García & Herrero (2021) and Ali et al. (2022) who studied the effect of board gender diversity towards financial distress in Chinese and European firms found that having females on the board of directors decreases the probability of a firm facing financial distress situation as having female directors would moderate a firm's risk due to their risk-averse traits. On the other hand, Saima & Arefin (2022) didn't find any significant relationship between board gender diversity and financial distress in Bangladesh.

In the context of Indonesia, Samudra (2021) found a significantly negative relationship between female directors and financial distress out of 389 Indonesian manufacturing firms. Eliya & Suprpto (2022) previously stated that when the board of directors within a company has the characteristic of being heterogeneous, it would positively affect the general condition of mentioned firm. But a different result is found in Ariska et al.'s (2021) research where there is no significant relationship between females on the board of directors and financial distress in Indonesian manufacturing firms. Koerniawan & Malelak (2021) does not find any significant relationship between female directors and financial distress in manufacturing firms in Indonesia. As there are many differences in previous research conducted, it is important to investigate more regarding female directors' relationship with financial distress to reduce the gap in the literature conducted.

**Table 1. Debt-to-Assets Ratio of Indonesian Companies**

RANK (WORST TO BEST)	SECTOR	DAR
1	INFRASTRUCTURES	123.779
2	CONSUMER CYCLICALS	0.991
3	TRANSPORTATION & LOGISTIC	0.604
4	ENERGY	0.592
5	BASIC MATERIALS	0.535
6	INDUSTRIALS	0.508
7	CONSUMER NON-CYCLICALS	0.473
8	PROPERTIES & REAL ESTATE	0.363
9	TECHNOLOGY	0.350

Source: IDX Quarterly Statistics (2022)

The majority of studies regarding female directors' relationship towards financial distress that are conducted in Indonesia is done by studying manufacturing sector companies. If the average debt-to-asset ratio (DAR) is compared across company sectors, infrastructure average firms have the highest risk of default due to lack of assets compared to their debts while manufacturing firms have ranked 2<sup>nd</sup> and 7<sup>th</sup> if taken apart into 2 separate categories, which is consumer cyclicals and consumer non-cyclicals. Although, this comparison has excluded the financial firms as banks and other financial institution has different operational procedure as well as financing sources resulting in a different type of financial report. Based on this comparison, sparked an interest to investigate female directors' effect towards financial distress within companies with the highest average leverage in Indonesia.

#### **HYPOTHESIS DEVELOPMENT**

García & Herrero (2021) previously concluded that having female directors would improve monitoring toward managers in a company as well as reduce agency conflicts within it resulting in a lower probability of facing financial distress. Whenever there is more female within the board, a company's leverage would be lower as the outcome would be lower risk and lower financing costs of a company (Ali et al., 2022; García & Herrero, 2021; Yousaf et al., 2020). Samudra (2021) argues that females generally have a different mindset and point of view compared to their male counterparts that if they are combined, a better perspective and synergy would be achieved rather than having only males on board. (Maier & Yurtoglu, 2022) states that as there is board gender diversity, firms would have unique expertise within the board of directors which helps in mitigating financial distress risks.

**H1:** Gender diversity negatively affects financial distress

#### **RESEARCH METHOD**

This research will use infrastructure firms listed in The Indonesia Stock Exchange (IDX) as the population of this study. Above mentioned sector is composed of 4 (four) sub-sectors, which are utilities, telecommunication, transportation infrastructures as well as heavy construction and civil engineering based on IDX Yearly Statistics 2022 published by IDX. Out of the total of 58 companies, 39 companies were taken as samples in this study as these companies met the research sampling criteria based on the purposive sampling technique with requirements listed below.

**Table 2. Samples**

	<b>Information</b>	<b>Amount</b>
	Infrastructure sector companies listed on Indonesia Stock Exchange	58

Companies that conduct initial public offerings after 2017	(13)
Insufficient annual reports	(3)
Insufficient data on annual reports	(4)
The number of sample companies that meet the criteria	38
The number of sample data for the 2017-2021 research period	190 sample

Source: Data Processed (2023)

Information that is made available to the public referred as secondary data is gathered for the purpose of this research (Digdowiseiso et al., 2022). Data were collected from the official website of IDX who published companies' annual reports and the period of this study ranged from 2017 to 2021. This research uses Stata 16 SE for statistics and regressions as panel data is being used and multiple linear regression compatible statistics program is needed in order to obtain the necessary evidence above conclusive results of this study. With Stata 16 SE, 5 models are used in this study with the equation as follows:

$$FDit = \alpha + \beta_1 FemDit \dots\dots\dots(1)$$

$$FDit = \alpha + \beta_1 FemDit + \beta_2 FSit \dots\dots\dots(2)$$

$$FDit = \alpha + \beta_1 FemDit + \beta_2 FSit + \beta_3 BSit \dots\dots\dots(3)$$

$$FDit = \alpha + \beta_1 FemDit + \beta_2 FSit + \beta_3 BSit + \beta_4 DERit \dots\dots\dots(4)$$

$$FDit = \alpha + \beta_1 FemDit + \beta_2 FSit + \beta_3 BSit + \beta_4 DERit + \beta_5 ROAit \dots\dots\dots(5)$$

Where:

- FD = Financial Distress
- FemD = Percentage of female director (Gender Diversity)
- FS = Firm Size
- BS = Board Size
- DER = Leverage
- ROA = Profitability

It is also important to note that, outliers are found in this study's sample. Outliers mentioned, are detected with the "extremes" command out of Stata 16 SE which detects sample values that deviate too far from observation. A total of 18 outliers that are removed from observation are listed below:

Hypothesis testing, which is a test to examine a relationship's significance between two or more variables in research, will be the main intention in conducting this research (Sepriani & Candy, 2022). The outcome of this study will be an investigation of how gender diversity directly affects financial distress in firms. Other than independent and dependent variables, control variables are being used as well in order to isolate other external factors that may affect the dependent variables as well (García & Herrero, 2021).

**Table 4. Measurement of Variables**

Variable Name	Variable Type	Measurement	Formula	Source
Financial Distress	Dependent	Altman Z-Score	$Z = \frac{1.2 \text{ Net Working Capital/Total Asset} + 1.4 \text{ Retained Earnings/Total Assets} + 3.3 \text{ EBIT/Total Assets} + 0.6 \text{ Share Price(Market Value of Equity)/Book Value of Debt} + 1.0 \text{ Sales Revenue/Total Assets}}{2.99}$	García dan Herrero, 2021; Maier dan Yurtoglu, 2022; Chen dan Liang, 2022; Salma dan Arefin, 2022; Isayas, 2021; Farooq dan Noor, 2021; Farooq et al., 2021; Younas et al., 2021; Ali et al., 2021; Shahwan dan Habib, 2020; Boubaker et al., 2020; Ogwoka et al., 2020; Desiyanti et al., 2019; Waqas dan Md-Rus, 2018; Udin et al., 2016; Shahwan, 2015

		EPS Dummy	If EPS is negative for financial report year, "1" is given to represent financial distress. Otherwise, "0" for non-distressed firms	Oare dan Appiah, 2021; Ariska et al., 2021; Bravo-Urquiza dan Moreno-Ureba, 2021; Yousaf et al., 2020; Mariano dan Izadi, 2020; Indarti et al., 2020; Yazdanfar dan Öhman, 2019; Balasubramanian et al., 2019; Žiković, 2017

## RESULT AND DISCUSSION

**Table 5. Descriptive Statistics**

Variable	Descriptive Statistics			
	Min	Max	Std. Dev	Mean
ZScore	-2.58505	14.36956	2.30943	2.10268

FemaleDire~r	0	0.66667	0.15655	0.10186
FirmSize	7.79e+07	2.77e+14	4.34e+13	2.34e+13
BoardSize	2	10	1.60877	4.85790
DER	-3.43356	370.57412	28.93746	4.49144
ROA	-1396.863	0.46437	101.35178	-7.58072

Source: Data Processed (2023)

Table 5 shows descriptive statistics of variables used in this study, composed of minimum, maximum, standard deviation, and mean values. The lowest value of Altman Z-Score is seen at PT Garuda Maintenance Facility Aero Asia Tbk in 2021 with a value of -2.59 while the highest value is seen at PT Himalaya Energi Perkasa Tbk in 2021 with a value of 14.37. The average Z-Score of infrastructure companies shows a value of 2.1, indicating that the majority of infrastructure companies are in the grey zone based on Altman Z-Score's interpretation. The female director has 0 minimum value as 61% of infrastructure companies don't have any female directors on the board. The highest percentage of female directors is 67% found in 2 companies, which are PT Solusi Tunas Prata Tbk in 2020 as well as PT Cardig Aero Services Tbk in 2020 and 2021. While the mean value of female directors shows 0.1, indicating that only 10% of the board in infrastructure companies are female.

**Table 6. Correlation Test**

	ZScore	Female~r	FirmSize	BoardS~e	DER	ROA
ZScore	1.0000					
FemaleDire~r	0.2161	1.0000				
FirmSize	-0.5058	-0.2500	1.0000			
BoardSize	-0.1458	0.1054	0.5487	1.0000		
DER	-0.3089	0.0792	0.2759	0.1393	1.0000	
ROA	0.4026	0.1741	-0.0381	0.0324	-0.3634	1.0000

Source: Data Processed (2023)

With correlation matrix shown on Table 6, the independent variable of this study which is gender diversity measured by percentage of female director has a positive relationship with the dependent variable, which is Altman Z-Score. This relationship aligns with the hypothesis of the study, in which whenever there is an increase in female directors' percentage, there will also be an increase in Altman Z-Score as well. Therefore, financial health of the company increases reducing financial distress probability of company. Other than that, control variables show a negative correlation with Altman Z-Score except for ROA.

Source: Data Processed (2023)					

As seen in Table 7, the percentage of female directors on board doesn't affect financial distress in 5 of the models with each of the tests showing a probability above 0.05. Even so, it is found that gender diversity's significance towards financial distress gets increasingly significant as control variables are added to the model. With probability score starts from 0.673 without any control variables and gradually decreases to 0.294 as control variables are added. Nonetheless, there is a possibility in certain sub-sectors would show a relationship between gender diversity and financial distress.

Transportation infrastructure companies do not show any significance of gender diversity's effects towards financial distress. With a probability score above 0.109, gender diversity has an insignificant relationship towards financial distress. On the other side, gender diversity has decreasing significance towards financial distress when control variables are added. Starting from 0.109 as the probability score, and showing a 0.435 probability score in the last model when all control variables are in the model.

Within telecommunication companies, it also doesn't show any significant relationship between gender diversity with financial distress. As the probability score shows 0.965, significance increases as control variables are considered in the regression. As control variables are added, the probability score of gender diversity decreases to 0.512, showing increased significance towards financial distress.

A different result is shown while examining the heavy construction and civil sub-sector. Gender diversity does have a significantly positive relationship on the measure of financial distress with a probability score showing 0.028, below 0.05.

But, the significance of the relationship faded as control variables were added to the model. As the probability score shows 0.0977, the significant effect of gender diversity on financial distress diminished.

## Discussion

In general, gender diversity does not have any significant relationship towards financial distress in the infrastructure sector of Indonesian companies. Even when classified into different sub-sectors, the majority of the results still don't show any significant relationship between gender diversity and financial distress. Except for the utility sub-sector, most data of the utility sector are categorized as outliers and excluded, there is insufficient data to do a regression. This result aligns with the research of Saima & Arefin (2022), Ariska et al. (2021), and Koerniawan & Malelak (2021). Ariska et al. (2021) argue that high gender diversity on the board of directors, doesn't necessarily mean that firms could prevent financial distress from happening as every favorable decision-making in the company would be depending on the ability of directors. It is also likely the that lack of gender diversity on the board of directors causes the insignificance of its relationship to financial distress.

Interestingly, is found that gender diversity has a significantly positive relationship towards Altman Z-Score as a measurement of financial distress in the heavy construction and civil sub-sector. Whenever there is an increase of 1 point of gender diversity on board, the Z-Score of the company would increase by 3.15 points. Therefore, the increase of Z-Score indicates a better financial health of the

firm, which would mean that gender diversity has a significantly negative relationship towards financial distress. This result aligns with the research of García & Herrero (2021), Samudra (2021), Ali et al. (2022), and Yousaf et al. (2020). García & Herrero (2021) and Ali et al. (2022) argue that reduces agency conflicts and increases monitoring of managers as well as capital structure in the means of controlling financial risk in which, reduces the probability of financial distress. Samudra (2021) states that a better synergy within the board of directors would be achieved when there is the presence of females on the board of directors based on the difference in ideas and perspectives between male and female directors.

**Robustness Check**

By substituting the main measurement of dependent variable within research with another measurement, is one of few commonly used methods for robustness test to examine and verify a model is robust as well as unbiased study results (Sepriani & Candy, 2022; Liu et al., 2021). In this study, dummy variable of financial distress will be employed in which a company will be scored “1” if negative earnings per share (EPS) is reported in a financial year and “0” otherwise, as this measurement is commonly used in financial distress research (Ariska et al., 2021; Balasubramanian et al., 2019; Bravo-Urquiza & Moreno-Ureba, 2021; Indarti et al., 2020; Mariano et al., 2020; Oware & Appiah, 2021; Yazdanfar & Öhman, 2020; Yousaf et al., 2020; Žiković, 2018). No significant relationship is found between gender diversity expressed by FemdirDummy towards financial distress in the infrastructure companies.

**Table 10. Robustness Check**

	(1)	(2)	(3)	(4)	(5)

## CONCLUSION AND RECOMMENDATION

10 There is no strong evidence between gender diversity and financial distress in Indonesian infrastructure companies including 3 out of 4 sub-sectors of the infrastructure sector. Best financial decisions made by the board depends on the directors' competence, not based on gender. But there's a different outcome in 1 sub-sector, which is heavy construction and civil sub-sector that is also a part of the infrastructure sector shows a significantly negative relationship between gender diversity and financial distress. Unique competence is achieved as different mindset and perspective within diverse gender on the board creates a synergy between male and female directors. Female directors are also risk-averse, that companies with gender diversity on the board would have the firm's leverage risk moderated to a certain safer level. Even so, the significant relationship mentioned diminished as control variables are taken into account. This research proves that only a certain sector could prevent financial distress by having gender diversity on the board of directors.

This research isn't free of limitations as only the infrastructure sector is used. The periods of study used are in the range of 2017 to 2021 and the use of only 1 country certainly limits the outcome of this study. Many other factors including governance factors might affect financial distress and provide better explanations are not considered during this research. It is recommended to include other sectors in order to obtain a wider perspective and outcome that applies to a broader context. A longer observation period, using more than 1 country as well as including other factors that might affect financial distress are also recommended for future research. In the corporate context, firms in Indonesia should consider having more female directors on the board to reduce financial distress risk based on outcome out of heavy construction and civil sub-sector that proves having gender diverse board of directors reduces the probability of facing financial distress in firms.

## ACKNOWLEDGEMENT

Authors would like to express gratitude to Dr. Candy, S.E, M.M, Dr. Hesniati, S.E, M.M, Hery Haryanto S.E, M.M and Delfina for their contributions in this research. No sponsorship or conflict of interest is associated with this research.
