

ABSTRACT

DESIGN AND IMPLEMENTATION OF INVENTORY SYSTEM WEB-BASED IN PT. INDOPROF DPENYET SEJATI

ERWIN CHANDRA

1531082

The design and manufacture of this system aims to record the stock in and out along with the report report. At this time, the company only uses manual system that is in the form of excel to record the condition of stock warehouse.

The design of this system starting from the beginning of February until the end of April by using qualitative methods. Applications that used in forming this system is using Adobe Dreamweaver, PHP, HTML and CSS. This system is implemented using localhost in PT. Indoproff Dpenyet Sejati.

This system can assist the stock controller in recording the goods available at the warehouse and help the cost controller to know the rest of the goods, goods transactions in and out of the company so as to assist the accounting team in working on the report.

Keywords: *stock, web, information system, inventory system*
