DESIGN ACCOUNTING INFORMATION SYSTEM AT MASTER LAUNDRY

**JESSY NOVIRA
NPM: 1642150**

ABSTRACT

In accordance with the results of observations and interviews that have been conducted at the Master Laundry about accounting recording and reporting systems. The Master Laundry still uses accounting records in the form of manual notes on books about cash income and cash disbursements, so no financial reports are produced. Thus the author wants to provide assistance with designing a system based on Microsoft Office Access that can facilitate store owners in recording company transactions and the formation of financial reporting. The purpose of this system was made to assist the Master Laundry in recording his accounting in accordance with specified accounting standards.

The design of the information system used is based on Microsoft Office Access. This design has been adapted to the request of the Master Laundry to help resolve difficulties in recording company transactions and forming financial statements. After the system is designed it will be given training or knowledge about the basic accounting and how to use the system so that users are able to input and make their own reports.

After carrying out the implementation phase there are differences between before and after using the system for the Master Laundry. Transaction recording becomes easier, more practical and with a simple display so that it is easily understood by users. Users can analyze the reports that have been generated so they can make useful decisions for the company. The system that has been designed is expected that the Master Laundry can continue to use it and the evidence that has been obtained from groceries can be archived according to the transaction number that has been inputted in the system.
