DESIGNATION OF ACCOUNTING RECORDING AND ACCOUNTING REPORTING ON BABYLAB

KARTIKA CAHYANI

NPM: 1642112

ABSTRACT

The implementation of practical work has the aim to resolve the obstacles encountered by Babylab in carrying out the trading business process which has been operating since February 2018. The problems faced are not far from the absence of clear and accurate financial statements because they do not have a simple and effective accounting recording system. .

The beginning of this practical work begins with observing the process of daily trading business activities Babylab which still often encountered obstacles, especially in financial statements that are still inaccurate. With these constraints, the application of a Web Application based program is more suitable for the needs of Babylab conditions whose financial statements can be accessed via mobile phones so that supervision is easier, in order to realize more quality and reliable financial reports.

The use of a Web Application system can produce financial reports that are more easily accessed. Presentation of a company's financial statements is very important in the direction of the company and making a decision in the company can also be faster and more accurate.
